## **CLAIMS**

## What is claimed is:

- 1. A training device for motorcycle racing, the device comprising:
  - a handlebar including a right-hand grip and a left-hand grip;
- a control lever mounted to the handlebar at or near the left-hand grip for simulating a clutch of a motorcycle;
  - a timing circuit including:
    - a display;
    - a timer connected to the display;
    - an output for generating a signal when activated;
    - a random-timing generator connected to the timer and the output; and
  - a switch connected to the timer and the random-timing generator and operatively connected to the control lever:

the switch for activating the random-timing generator when the control lever is actuated;

the random-timing generator for simultaneously activating the timer to begin timing and activating the output to generate a signal, at a random time after being activated by the switch;

the switch for stopping the timer when the control lever is released; and the display for displaying an elapsed time between the timer being activated and being stopped.

- 2. A device as claimed in claim 1 wherein the output is a visual output.
- 3. A device as claimed in claim 1 further comprising a power supply and an on/off switch for supplying power to the timing circuit.
- 4. A device as claimed in claim 1 wherein the switch is operatively connected to the control lever by a cable.
- 5. A device as claimed in claim 1 further comprising a reset switch for resetting the display to zero.
